

ABSTRACT

The invention relates to an arrangement for a portable bucket or a similar container which includes a carrying handle. The bucket exhibits triangular cross-sectional form. The angle between the two shortest sides of the bucket is essentially a right angle, and the handle is arranged in such a way that the effective carrying point for the bucket is situated in a vertical plane located at a point ca. 1/3 across the width of the bucket between the longest side of the bucket and the right angle closest to the aforementioned longest side of the bucket.
